E-cigarette fact sheet for parents and teachers

E-cigarettes cause serious health risks to teens.

Since the mid-2010s, there has been a **big rise in young people using e-cigarettes**, including teens who have never smoked. A Royal Children's Hospital 'Child Health Poll' found over half of parents have never talked about e-cigarettes with their teen. Social media is being used by tobacco and e-cigarette companies to **sell e-cigarettes to teens and young adults**.

About e-cigarettes

E-cigarettes, also known as 'vapes', are electronic devices that use batteries.

They work by heating a liquid until it becomes an aerosol that the user breathes in. Using an e-cigarette is commonly called 'vaping'. Some people think the mist from vaping is a vapour, like steam. It's not. It is really an aerosol, a fine spray of chemicals that enters the body through the lungs and small particles that can get stuck in the lungs.

Fast facts

1 | Legality of e-cigarettes

- Buying an e-cigarette or liquid with nicotine in it is **illegal** in Australia unless the person has a doctor's prescription.
- Nicotine-containing e-cigarettes and liquids can only be sold to people with a valid prescription in pharmacies.
- In Tasmania, e-cigarettes and liquids that don't contain nicotine can be sold in shops, but it is illegal to sell them to a person under 18 years old.

2 | Safety

- Most e-cigarettes and e-liquids that don't show nicotine on their label in Australia do, in fact, have nicotine.
- There are no quality or safety standards for e-cigarettes or nicotine- free liquids, meaning their make, ingredients and labels are not regulated or checked.
- E-cigarettes can explode or catch fire.
- E-cigarette liquids can cause poisoning if swallowed.

3 | Detecting e-cigarette use

- E-cigarettes come in all shapes and sizes. They can look like a **highlighter**, a **pen** or **USB**. Some can be **disposable**, and some are small enough to fit into a pocket or a pencil case. An e-cigarette device can be identified by taking the cap off the item to see if it has a mouthpiece.
- Not all e-cigarettes release an aerosol that can be seen. The easiest way to detect e-cigarette use is if there is an **unexpected smell in the air** from e-cigarette flavouring. Teens tend to use fruit or sweet flavours, so this scent is usually sweet.

4 | Harms of e-cigarettes

- Nicotine **harms the way teenage brains grow**, which may affect memory and concentration.
- Teens become more easily and rapidly addicted to nicotine than adults, and those who use e-cigarettes are more likely to start smoking cigarettes.
- The short-term health effects of e-cigarette use can include vomiting, nausea, and lung injury.
- The long-term health effects are not yet known; however long-term impacts could include an increased risk of cancer, heart disease, or lung disease.
- It is the wide range of chemicals, regardless of nicotine content, that likely cause harm.
